# Introduction

The diagnosis of cancer is a frightening, life-altering experience for patients and their families. The multidisciplinary group of healthcare professionals at the Richard G. Laube Cancer Center recognizes this and is committed to assisting patients through diagnosis, treatment and follow-up care, maintaining the patient at the heart of the treatment team. Our program, is accredited by the American College of Surgeons (ACOS), Commission on Cancer (CoC), which recognizes high quality care, provides comprehensive medical and radiation oncology care utilizing the latest advances in technology in a convenient community setting. We continue to work in close collaboration with tertiary care centers and their physicians to offer our patients optimal, personalized care close to home. With pride, we present our annual report offering a glimpse into the many programs and services available at ACMH's Richard G. Laube Cancer Center.

The Cancer Care Team and staff recognize the importance of early detection and prevention of cancers and offer several screening and education programs for the community. We continue to provide free skin cancer screenings, which are very well received. We also recognize a need to emphasize to our community at large the need for early colorectal cancer screening. We are pleased to have been able to collaborate with other area agencies, such as the American Cancer Society, Adagio Health and The Pittsburgh Affiliate of Susan G. Komen for the Cure to provide these services to the community. Dedicated oncology staff also target our local high schools and businesses with prevention and early detection information, particularly related to skin cancers and tobacco related cancers.

We continue to actively accrue patients to clinical trials realizing the importance of the participation benfits for patients who enroll, as well as the importance of clinical trials for advancing cancer care, prevention and treatment options for cancer patients throughout the world. We continue to participate with NRG Oncology which has brought the National Surgical Adjuvant Breast and Bowel Project (NSABP), Radiation Therapy Oncology Group (RTOG) and the Gynecologic Oncology Group (GOG) all together. We also participate in data studies as well as industry trials just to name a few.

The role of the oncology nurse navigator continues to expand at ACMH Hospital. Our navigator enthusiastically acts as a liaison assisting patients as they navigate through often complex cancer care and treatments while providing emotional support. This assists in bridging the potential gaps in care. Our navigator has received much positive feedback from patients as well as the medical community and is an asset to our program.

A Licensed Clinical Social Worker is on site full time and offers personal counseling and support in accessing resources for medications, transportation, utilities, insurances and financial support.

As part of our ongoing commitment to our patients and continued improvement, a utilization of the education simulation lab was used for testing oncology nursing competencies. Our goal was met having 100% of the chemo trained nurses having their chemo administration and management of chemorelated anaphylaxis competencies completed.

In the summer of 2016 ACMH added 3D mammography (breast tomosynthesis) to its repertoire of women 's imaging. This information was distributed to all local docotor offices and to the community by means of billboard advertising, and health fairs.

The Cancer Center also continues to promote a Lung Screening Program unveiled by Foundation Radiology Group and ACMH Hospital. The goal of this low dose CT scan project is to increase the rate of detection of stage I and II cancers.

Thank you to all whose dedication and hard work have helped to make the Cancer Program at ACMH Hospital successful as we continue to strive for excellence.

Sincerely,

The Cancer Care Team

# **Cancer Registry**

The Cancer Registry collects detailed information for all patients diagnosed and/or treated at ACMH with a malignancy or any central nervous system tumor. Information collected and analyzed includes demographic, personal and family histories, risk factors, diagnostic procedures, site and histology, tumor markers, prognostic indicators, staging, treatment, follow-up and survival data for each case. Data is collected following a strict set of coding rules and must meet the requirements of the Pennsylvania Cancer Registry (PCR), the Commission on Cancer (CoC), and the Cancer Committee.

The information in the registry is used for purposes of quality improvement, meeting the CoC standards necessary to maintain accreditation, statistics, and research. Cases are submitted to the PCR monthly and the NCDB (National Cancer Database) annually. Benchmark reports are provided by the NCDB for review of patient outcomes and to see how our hospital delivers care in comparison to other facilities across the nation. This information can be used as a tool to implement improvement processes as well as to identify areas of excellence.

Continuing education is a requirement for Certified Tumor Registrars. In 2016 the ACMH registrar attended a training on staging sponsored by the PA Cancer Registry and completed the AJCC Curriculum for Registrars on the AJCC website. The CE credits submitted for the current cycle were validated by the National Cancer Registrars Association and certification is approved through 12/31/18.

A total of 386 cases were entered into the registry data base for 2016. 345 were analytic (newly diagnosed) and 41 were non-analytic (seen for recurrent or persistent disease not initially treated at ACMH). The quality of the registry data is verified by extensive edits built in to the registry software as well as a physician review of 10% of the cases. The NCDB Annual Call for Data was submitted error free.

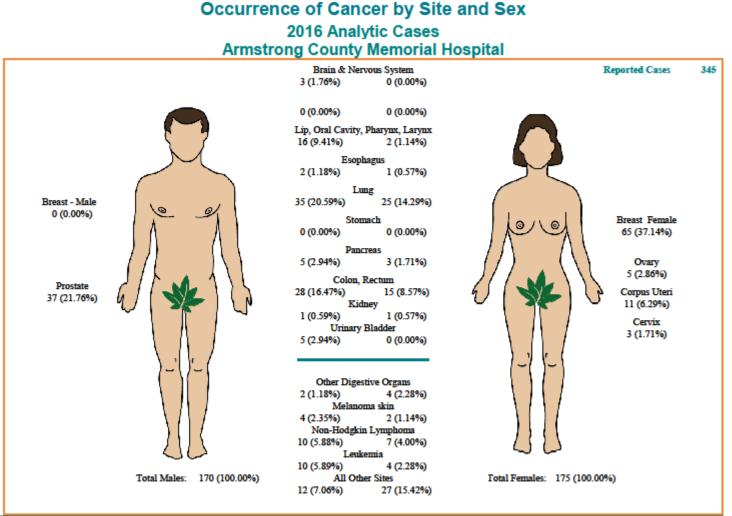

Site	Number of Cases	Percent of Total Cases			
Breast	65	19%			
Lung	60	17%			
Colorectal	43	12%			
Prostate	37	11%			
Non-Hodgkins Lymphoma	17	5%			

The top analytic cancer sites for 2016, including in-situ and invasive, were:

#### Cancer Registry, Continued from prior page.

Each patient in the database is followed annually in order to acquire information on recurrences, subsequent treatment, and survival. This process benefits patients because it serves as a reminder to physicians of the need for continued surveillance. The ACMH registry is currently following 2,777 patients.

Cervix	0	3	0	2	1	0	0	0	0	3	0.87

This graph is the top 24 sites so doesn't include all 345 analytic cases

# **Clinical Research**

ACMH is a community based hospital which participates in a number of clinical trials. In 2016, we have affiliated with Allegheny Health Network and their physicians to offer our patients access to AHN Clinical Trials in our Cancer Center. Each new cooperative group trial offered here will have a specific Study Site Agreement. AHN 's Institutional Board (IRB) will serve as the IRB of record for ACMH on any AHN study offered here on our campus. ACMH will maintain their Federal Wide Assurance in good standing and our independent IRB will remain intact when needed. Patients on trials will be discussed with ACMH 's IRB Committee. Access to trials is offered through NRG Oncology which is a Pennsylvania nonprofit corp. founded to consolidate three adult NCI clinical cooperative groups: National Surgical Adjuvant Breast & Bowel Project (NSABP), Radiation Therapy Oncology Group (RTOG) and Gynecologic Oncology Group (GOG). ACMH also enrolls patients through the Cancer Trials Support Unit (CTSU) which is a service of the National Cancer Institute (NCI) that provides clinicials across the U.S. and Canada access to cancer trials. ACMH Cancer Center also has access to pharmaceutical sponsored trials, prevention, screening and compassionate use protocols, observational students and data registry studies.

The study coordinator reviews history & pathology of all new cancer patients diagnosed at our ACMH facility in the inpatient & outpatient setting for potential eligibility to participate in a clinical trial. The study coordinator works closely with the Medical Oncologists, Nurse Practitioners, Physician Assistants and Clinical Pharmacists to discuss new and available studies along with the possibilities of patient enrollment. We continue to have steady enrollment in the number of patients electing to participate in a clinical trial at ACMH. The study coordinator also assists the Medical Oncologists in referring patients to other research facilities if there is an open trial that may benefit our patient but cannot offer participation here at ACMH. We are proud to offer this program as an additional treatment option in our community.

# **Education & Enlightenment**

#### TUMOR BOARD (Cancer Conference)

The Tumor Board at ACMH typically meets the 1st, 3<sup>rd</sup> and 5<sup>th</sup> Tuesday of each month to present cancer cases for prospective review. The Cancer Conference offers multidisciplinary consults on every case presented. This structure ensures the availability of modern pretreatment evaluation, including accurate staging, up-to-date multidisciplinary treatment, and ongoing quality assessment including management guidelines. Cancer Conference focuses on problem cases and on pretreatment evaluation, staging, treatment strategy and quality of life. Participants include physicians from the Departments of Pathology, Medical Oncology, Radiation Oncology, Diagnostic Radiology and Surgery, as well as oncology nursing, social services, nutrition and tumor registry.

All major sites of cancer diagnosed and/or treated at ACMH are covered throughout the year with an average of twelve in attendance. Sites discussed included lung, gastric, pancreatic, breast, colon, B-cell lymphoma, hepatic, testicular, bladder, rectal, brain, head & neck, Hodgkin 's lymphoma, skin, urothelial, papillary, cervical, liver, endometrial and appendix cancers. Staff physicians are welcome and are invited to bring any oncology case to Tumor Board for discussion and/or second opinion review.

#### **TUMOR CONFERENCE**

The Tumor Conference typically meets quarterly at ACMH to offer educational opportunities, at least one of which relates to the use of staging and national treatment guidelines, for all physicians as well as hospital staff. This is a conference given by the speakers' bureau as well as industry speakers. Topics

included: Immuno-Oncology: A Treatment Approach for Previously Treated Metastatic NSCLA on March 15, 2016 by Andrew Lepisto, Medical Science Liason Bristol-Myers Squibb regarding OPDIVO. OPDIVO is indicated for the treatment of patients with metastic non-small cell lung cancer with progression on or after platinum-based chemotherapy.

The Changing Face of OPC: Evolving Trends of Oropharyngeal Squamous Cell Carcinoma by Alexander Barsouk, MD on May 3, 2016. The purpose of this series was to educate healthcare professionals about oropharyngeal cancer and to raise awareness of the changing landscape.

# **Care & Compassion**

## NUTRITION SERVICES

Nutrition is an integral part of the management of cancer and related therapies. The maintenance of an adequate nutrition status may reduce the complications from oncologic therapy and may contribute to the patient 's sense of well-being. A Registered Dietitian is part of the ACMH Hospital Cancer Care Team and is available for consultation as the need arises.

Patients and families can request to meet with a Dietitian for nutrition concerns and suggestions for optimizing meal planning.

## **REHAB SERVICES**

ACMH Rehab Services (Physical, Occupational, and Speech Therapy) are available to provide services to patients who may have functional limitations/impairments, disabilities, or changes in physical function and health resulting from injury, disease process or other causes. Our highly skilled therapists can provide care to patients in a variety of settings across the continuum of care (Inpatient, Outpatient, Skilled Nursing, and Acute Rehab). The therapists design individual treatment programs to address each patient 's physical and functional deficits. Our Physical Therapists, Occupational Therapists and Speech Therapists are available to treat Cancer related problems such as: pain, weakness and fatigue, difficulty with gait or unsteadiness (Ioss of balance), lymphedema, loss of joint range of motion or function, stress/anxiety, difficulty with activities of daily living and speech and swallowing dysfunctions. We also have 2 off campus offices, one in Ford City and one Leechburg that also provide outpatient PT.

## CANCER GENETIC COUNSELING

In collaboration with Allegheny General Hospital, we are able to provide cancer genetic counseling to our patients and their families on-site. A genetics counselor is available monthly to meet with patients to discuss the risk assessment and testing. Patients have the opportunity to speak with the medical oncologist specializing in cancer genetic testing via teleconference. We are fortunate to be able to offer this important service on-site for patients with significant family medical histories of cancer.

## **ONCOLOGY SOCIAL WORKER**

The Oncology Social Worker assists in identifying psychosocial issues of patients, families and significant others who are facing the impact of cancer. The social worker acts as an advocate for patients and their families by helping others understand their needs. The social worker is also responsible for counseling, education, case management, financial assistance and networking community services.

### **ONCOLOGY NURSE NAVIGATOR**

The Oncology Nurse Navigator at ACMH Hospital is available to assist cancer patients obtain timely and efficient care from diagnosis to treatment to follow-up cancer care. Currently the Navigator 's primary focus is our breast cancer patient population, but is available for any oncology patient in need of assistance.

Getting a breast cancer diagnosis can be very scary. Getting through the maze of appointments with radiology, cardiology, laboratory, surgery, oncology, and radiation oncology can be confusing and overwhelming. Once a newly diagnosed patient receives her diagnosis of breast cancer, the nurse navigator contacts her and provides information about her pathology report, diagnosis, possible treatment options, and what to expect at her first visit with the surgeon or oncologist. The time period between diagnosis and initial appointment with the specialist is extremely stressful. Having a point of contact during this critical time can be very helpful for patients who may have additional questions or need emotional support.

Once the patient 's treatment plan is in place, the nurse navigator stays in contact with the patient. Patients are contacted post-op to monitor for pain and drain management. If chemotherapy is indicated, patients are monitored for treatment-related side effects. Patients often call with questions related to diarrhea, constipation, and infection. The nurse navigator often serves as a triage nurse, directing patients on how to manage these symptoms at home, recommending they call their doctor, or urging them to visit the emergency room. The nurse navigator also acts as a liaison, updating the physicians on the patient 's care team as needed.

Patient navigation services are constantly being reviewed and changed based on the needs of our patient population and the needs of the physicians. Although breast cancer patients are our main focus, any patient can be referred for navigation services. If you would like to refer a patient to the patient navigator, please call 724-525-6496.

## **Community & Commitment**

#### COMMUNITY HEALTH SCREENINGS

The first of two free cancer screenings offered by the Laube Cancer Center and staff was held on June 25, 2016 from 8am-1pm. In attendance were 78 participants for the skin screening and 14 scheduled for the head and neck screening. 70 skin screening participants showed up on the day of the screening, 27 (38%) of which were referred for further care. 12 of the scheduled showed up for the head and neck screening, all of which had normal screenings. Around 40 people were placed on a waiting list after the schedule was filled. Letters of the results were sent to the participants as well as their PCP 's. All patients who had a positive finding were given a referral list for dermatologists or general surgeons in the area.

A second screening was held on September 11, 2016 from 4:30pm—7:30pm. These patients were overflow patients from the June 2016 screening. There were 27 patients in attendance. There were 14

(52%) were referred for additional care. The patients were referred to a dermatologist and/or surgeon (general or plastic) depending on their individual circumstance. Letters with the results were sent to the participants PCPs. In addition to the skin-screening exam, the participants received education on the prevention and early detection of skin cancer.
